

Maximising MicroNet Reliability & Availability Module Validation Program

A solution by PM Control

Introduction

PM Control is a Woodward Licensed Test Facility (LTF) for the MicroNet Module Validation Program (MVP) for Woodward MicroNet Plus and MicroNet Plus TMR modules. The modules are verified to original factory specifications and give end users the confidence that critical control modules operate to Woodward factory specifications.

Periodic validation test of spare and in-operation modules will ensure that the modules are "ready for use" at any time, enhancing system availability and continuity of production.

Non conforming cards can be promptly replaced by a new unit from Woodward.

PM Control can give expert advice on any pending obsolescence.

Advantages

- Simple in-region test to confirm modules are within specifications
- Prompt replacement of non-conforming modules
- Notification of product obsolescence

- All modules are tested in Woodward's designed test stand
- All modules tested are verified against factory specifications
- Modules are cleaned and visually inspected for damage or corrosion
- PM Control technicians are trained and authorized by Woodward
- Licensed Test Facilities in Singapore and India
- Module validation test charges will be waived for modules that failed the test and repairs are requested by end users or new modules are purchased from PM Control.

Woodward Licensed Test Facility (LTF)
