

CPC

Current-to-Pressure Converter

Applications

The Woodward Current to Pressure Converter (CPC) is designed for positioning steam and fuel valves and/or the associated servos. A 4–20 mA in/out signal is linearly and proportionally converted into a hydraulic output pressure. The CPC can thus interface with any electronic control, such as Woodward MicroNet™ systems and the Woodward 505 Control. It connects to pressure-operated servo systems and to single-acting power cylinders. The CPC is suited for new as well as retrofit applications.

Description

The CPC is an electrohydraulic, pressure-regulating valve, which consists of a valve, an actuator, a pressure sensor, and on-board electronics.

The electronics perform the signal conditioning by comparing the actual output pressure with the command, which results in a reference signal for the valve position. This reference signal is then compared with the actual position, resulting in a drive signal. The driver circuit then outputs the appropriate signal to the actuator, which positions the hydraulic valve to the required position.

The valve consists of two ports; one from supply to output, and one from output to tank. By opening one of these ports, the output pressure decreases or increases.

Two output signals are provided: a 4–20 mA signal, representing the actual output pressure, and a relay output, indicating a malfunction of the CPC.

Features

The CPC has an anodized aluminum housing, coupled with a cast, anodized aluminum top cover. This enclosure contains the printed circuit board, the pressure sensor, and the actuator. The rotor of the actuator is directly coupled to the one-stage hydraulic valve.

The construction of the hydraulic valve in the CPC tolerates contaminant particles up to 40 µm.

Upon loss of power, a return spring will force the output pressure to the drain pressure (failsafe).

A brass cable gland is provided for cable access with electrical signals.

The CPC mounts to a manifold with a standard instrument mounting-hole pattern according to DIN 19213.

- Precise fluid pressure control
- Linear operation
- Adjustable output pressure range
- Two output signals
- Contaminant tolerant
- Standard instrument mounting
- Models are available with certification for Canadian Hazardous Locations
- Models are available compliant with the applicable CE Directives—ATEX, Machinery, and EMC

Accessories

A standard stainless steel adapter plate (part number 4349-231), with or without close-off valves, can be supplied with the CPC. To replace the obsolete I/H converter, use adapter plate 3689-097.

Specifications

Electrical

Connections 9 screw terminals on the internal printed circuit board suitable for 0.2–4 mm² solid or

0.2-2.5 mm² stranded wire (24-12 AWG). 1.5mm² (16 AWG) is recommended for

the power lines, and 0.75 mm² (18 AWG) for all other connections.

Cable Entry Via cable gland—cable diameter 9–12 mm

Supply Voltage 18–32 Vdc (24 Vdc nominal)

Power Consumption 8 W during steady state, 120 W peak (3 seconds maximum)

Current Input Signal 4–20 mA into 250 Ω

Analog Output Signal 4–20 mA—maximum external load: 300 Ω. Accuracy = ±1% of full scale

Discrete Output Signal Relay—jumper selectable for normally open or normally closed. Maximum rating 1 A

at 30 Vdc

Dither Frequency 10–30 Hz—Default setting is 30 Hz

Dither Amplitude Zero is minimum and default. Maximum depends on adjusted frequency and

dynamic characteristics of the entire system.

Hydraulic

Connections Flat mounting face, hole pattern according to DIN 19213. Hydraulic connections via

an adapter plate (optional).

Supply Pressure 17 bar (250 psi) maximum. At least 0.5 bar higher than the maximum output

pressure.

Output Pressure Minimum level: 1 bar (14.5 psi)

Maximum level: 15 bar (217.5 psi) Minimum range: 1 bar (14.5 psi) Maximum range: 14 bar (203 psi)

Standard Pressure Range 4–20 mA gives 1.5 to 4.5 bar (21.75 to 65.25 psi) Recommended Filter Rating Nominal 40 µm and 75 µm absolute (B40,=75)

Viscosity 20 to 100 cSt

Leakage Depends on viscosity and supply pressure—see figure
Flow Capacity Depends on viscosity and pressure difference—see figure

Technical Manuals 89543 (standard version) 26248 (explosion-proof version)

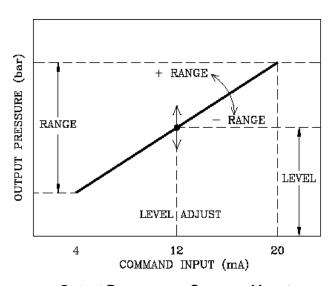

Performance

Frequency response 10-30 ms time constant, small step, blocked load (no servo system attached to the

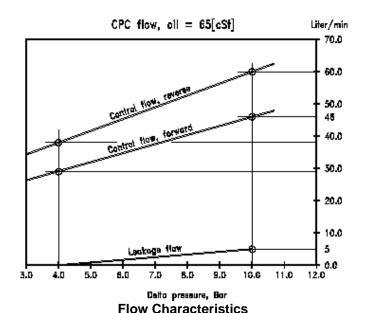

CPC). Ultimate dynamic response depends on total servo system and dynamic

adjustments to the CPC.

Linearity 0.2% of full range 0.1% of full range 0.1% of full range 0.01% full range /°C

Output Pressure vs. Command Input

Environmental

Ambient Temperature —20 to +85 °C standard unit

−20 to +60 °C explosion-proof unit60 °C maximum, 80 °C peak

Oil Temperature 60 °C maximum, 80 °C peak
Maximum Surface Temperature 85 °C, provided above temperature requirements are fulfilled

Vibration Lloyd's LR type approval test specification 1, test 2, 5-100 Hz at 4.0 G

EMC EN 61000-6-2 and EN 61000-6-4

Dust and Waterproof IP65 per EN60529

Physical

Dimensions See outline drawing

Height x Width x Depth Approximately 220 x 170 x 200 mm

Weight Approximately 10 kg without oil

Mounting Four M10 threaded holes, 23 mm deep, on the face with the hydraulic ports,

according to DIN 19213

Regulatory Compliance

European Compliance for CE Marking

These listings are limited only to those units bearing the CE Marking.

EMC Directive: Declared to 89/336/EEC COUNCIL DIRECTIVE of 03 May 1989 on the

approximation of the laws of the Member States relating to electromagnetic

compatibility.

ATEX – Potentially Explosive Declared to 94/9/EC COUNCIL DIRECTIVE of 23 March 1994 on the

Atmospheres Directive: approximation of the laws of the Member States concerning equipment and

protective systems intended for use in potentially explosive atmospheres.

KEMA 03ATEX2427X

Zone 1, Category 2, Group II G, EEx d IIC T4

For use in an ambient temperature range of -20 to +60 °C

Other European Compliance

Compliance with the following European Directives or standards does not qualify this product for application of the CE Marking:

Machinery Directive: Compliant as a component with 98/37/EC COUNCIL DIRECTIVE of 23 July 1998 on

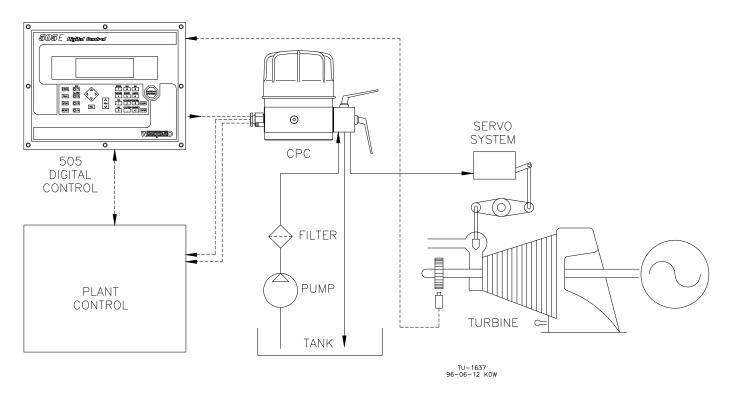

the approximation of the laws of the Member States relating to machinery.

North American Compliance

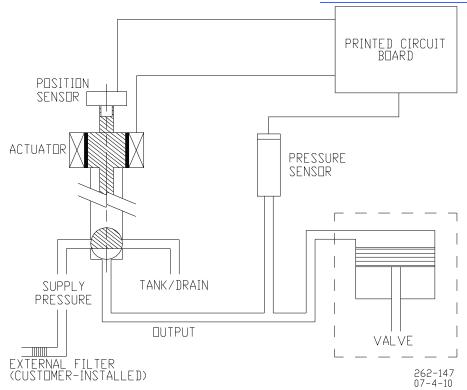

These listings are limited only to those units bearing the CSA agency identification.

CSA: CSA Certified for Class I, Division 2, Groups B, C, and D, T4 at 60 °C Ambient for

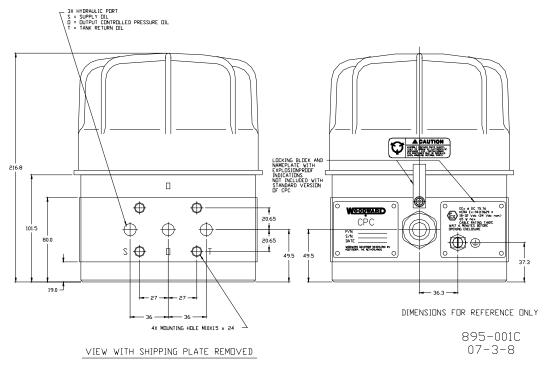

use in Canada
